PRACTICE CHOICE

EXTENDED PROFILE

OVERVIEW

eMDs' Practice Choice integrates business management services and EHR in one cloud and server-based software. Practice Choice is designed for all sizes of practices and manages the widest range of clinical workflow out of all of eMDs' EHR solutions.

The software works on the principle that clinical outcomes improve with administrative efficiency. They seek to streamline scheduling with billing so that there is no delay in retrieving the revenue that will keep the business flourishing. The aim is to also offer excellent clinical support. eMDs is one of the leading suppliers of ambulatory software on the market, so has the expertise to support diagnosis as well as the clear recording of notes, vitals, and information such as allergies and medications.

Smart Note technology, which powers eMDs Practice Choice, means that the doctor can document everything on a single screen, pulling data from anywhere in the patient's chart. There is also the Advanced solution, which allows for a virtual back office team to manage the financials of the practice.

The software is designed in modules, so is accessible to all budgets and expandable with the growth of the clinic. Practice Choice is web-based and has been designed for simplicity and ease of use for the clinician at work. Being internet-based means that the material is constantly updated and backed up, reducing the risk of data loss. This also means the physician has flexible access to the office, so can update records in real time when working remotely.
