

WRS HEALTH EMR

EXTENDED PROFILE

OVERVIEW

WRS Health is a solution that includes customizable templates and functionality for 35 different specialties along with specific CPT and ICD codes for each.

The WRS Health software has been developed to learn from the way that practice professionals chart as well as the collective knowledge of all of its users. The most commonly used medications, as well as diagnoses and procedures, are stored and learned and then presented again in another workflow. Similar procedures and diagnoses from other practices using the system are also learned and become available.

WRS Health is priced according to the number of users within a practice through a monthly subscription. All of the subscription plans include support and regular updates with further discounts available for multi-provider organizations and those that bundle services together.

WRS Health is a cloud-based system that can be accessed via a browser. The system has laboratory and Health Information Exchange connectivity as well as other integrations.
